Homework #2

- Design a wearable warning system (WWS) which:
  - Uses sensors to detect possible threats, and
  - Uses “partners” to lower the wearer’s exposure
  - Design WWS to “know” about:
    a) A rapidly approaching object of significant size
    b) Insufficient engagement in an ongoing conversation
    c) The presence of a virus
- Deliverable requirements:
  1. Use a context model to show WWS and its partners
  2. Specify a binary protocol for all C-C-I communication
  3. Estimate the benefit of WWS with respect to each threat
  4. Describe each of WWS’s states and explain each of its state transitions
- Submit to Canvas by Feb. 23rd
